Hillsboro, OR | 4511saiteja@gmail.com | [LinkedIn](#) | [Github](#)

PROFESSIONAL SUMMARY:

Software Engineer with hands-on experience building scalable distributed systems and Kubernetes control planes for bare-metal and GPU compute. Expertise in Go and Python for cloud-native microservices, with production experience deploying and operating LLM inference platforms.

TECHNICAL SKILLS:

Languages: Go, Python

AI & Inference: vLLM, SGLang, Ollama, LiteLLM, Langfuse

Cloud & DevOps: Kubernetes, Docker, Helm, Jenkins, GitHub Actions, Bazel, AWS, GCP

Infrastructure & APIs: gRPC, REST, Protobuf, Redfish, BMC/ipmitool, Metal3

Observability & Monitoring: Prometheus, Kibana/ELK, Grafana

Databases: MySQL, PostgreSQL, MongoDB

Operating Systems: Linux

PROFESSIONAL EXPERIENCE:

Software Engineer – AI Infrastructure & Compute

Intel Corporation, United States

09/18/2023 – Present

- Designed and built BareMetal as a Service (BMaaS) platform, architecting Kubernetes control-plane operators (Instance, Scheduler, Validation) automating bare-metal and GPU node lifecycle for production.
- Developed BMaaS platform APIs combining user-facing REST endpoints with gRPC-based microservices for resource provisioning and infrastructure orchestration.
- Designed and deployed Inference as a Service platform serving LLM workloads on bare-metal GPU compute using vLLM, SGLang, and Ollama (llama.cpp), with a LiteLLM proxy gateway for complexity-based request routing and Langfuse for LLM observability.
- Developed an agentic AI validation system with an LLM orchestration layer that translates natural-language requests into parameterized validation workflows executed through Kubernetes APIs.
- Implemented CRD-driven validation workflows gating node re-entry into the available pool, executing performance workloads and system validation (drivers, interconnect, preflight checks) after customer deprovisioning.
- Built an auto-discovery service integrating with regional network switches to verify BMC reachability and VLAN configuration, automating pre-flight checks and enrollment readiness for new bare-metal nodes.
- Implemented cloud-init based bootstrapping to standardize node OS configuration, reducing manual setup.
- Leveraged metrics and log-based observability (Prometheus, Grafana, ELK/Kibana) to debug node bring-up failures, validation issues, and control-plane reconciliation behavior.
- Secured validation workflows using OIDC authentication, Kubernetes RBAC, namespaces, and resource quotas to enforce multi-tenant isolation.

Software Engineer Intern

Intel Corporation, United States

10/03/2022 – 08/18/2023

- Integrated gRPC and REST APIs into various testing frameworks for IDC infrastructure.
- Developed Jenkins pipelines supporting deployment flows for internal services.
- Created automated testing frameworks using Go (Ginkgo, Testify) and Cypress for billing, metering, and identity services, automating health checks and API regression validation across environments.

EDUCATION:

Master of Science, Computer Science

Portland State University, Portland, USA

09/2021 – 08/2023

Bachelor of Technology, Information Technology

Vellore Institute of Technology, Vellore, India

07/2017 – 06/2021
